

# Wavefold

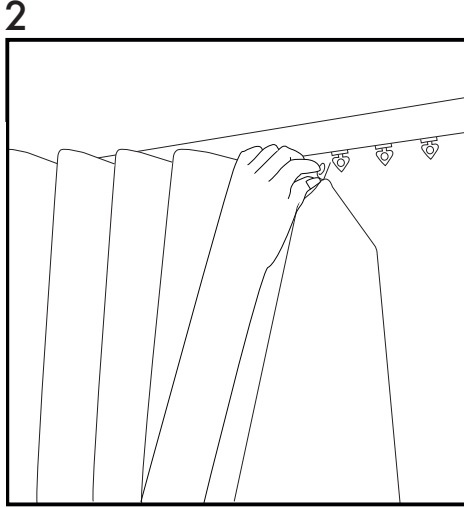

## Hanging Instructions

Hanging your Wavefold curtains is very simple. The beauty of the heading is the wavefold is made by the track and you simply hook the curtains into the track gliders.

### Hanging Your Curtains On a Track

The Wavefold curtain has the correct amount of hooks in it to suit the track. Firstly, start hooking the curtain into the track from the left hand side. The first hook goes into the end glider. As you go to the next hook, gently curve the heading and hook the curtain into the next glider. Continue this process until all hooks are in the gliders.

Once finished you should have a even wave in your curtain. Once you have completed this run your hands down the curtain to ensure the folds are working with the heading and not ballooning out. To hold the curtain into place use strips of ribbon or something soft to tie around them loosely. Try to leave your curtain like this for a few hours or even a full day and then they can be closed.
